

Allegro Weapon Shot Counter

Allegro

RuBee Weapon Shot Counter with Proven Accuracy, Security, and Armory Automation

Trusted in the most secure environments in the world. Allegro is a weapon shot counter based on magnetic wireless technology (RuBee) that is designed to meet the needs of the Armorer and Warfighter. Allegro provides dual comparators and extended sensitivity levels to distinguish between live and blank rounds. This capability allows the Armorer or Warfighter to diagnose weapon issues well in advance and position assets that are ready to perform at the highest level.

A state of the art IoT wireless sensor network, Allegro works seamlessly with Armory2020. RuBee enabled visibility delivers 100% automated inventory scans at a speed of 6/tags per second, issuance transfers in seconds, and perimeter security that is unmatched.

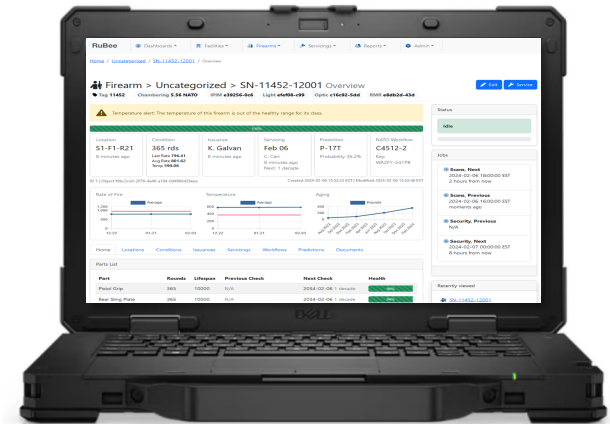

Since RuBee is magnetic it works in the harshest environments where other RF based technologies fall short. It reads through and around metal, liquid, and people.

RuBee is physically secure has no significant compromising emanations. RuBee signal drops off at $1/R^3$ and has no tempest, target, or eavesdropping risk.

FEATURES

- Form Factors: Grip, Surface Mount, Barrel Handle, Rail
- Field Proven 20 Year Battery Life
- Counts Live and Blank Rounds
- Battlefield Radio Silent Mode
- No Compromising Emanations
- RuBee Wireless Link – reads through metal and liquid
- >99% Accuracy across all platforms
- Rate of Fire Histograms
- Calculated Barrel Temperature Histograms
